

Computer Programming

Why use Computer Programming

Many people describe **computer programming** (often called **coding**) as creating executable instructions for computers.

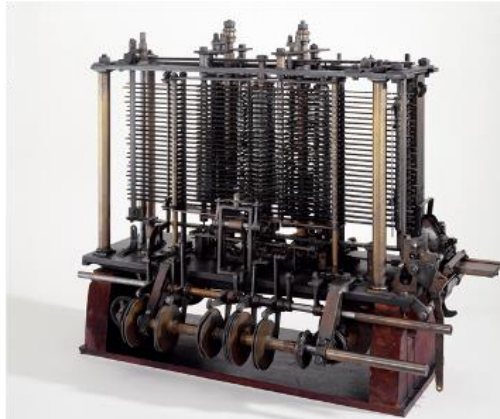

```
computer_programming <- "fun"
if (computer_programming == "fun"){
  print("That's right")
} else{
  print("Let's change your mind")
}
```

What are Computers?

Computers do computing.

**Chinese Abacus
(Suanpan)**

**Ada Lovelace
Computer Program**

**NASA Human
Computers**

Macintosh

Computer programs are interpreted by other "human" computers too.

Demo

Computer Programming
with R Scripts

In this demo, we will:

Create an R Script to execute multiple commands.

Knowledge Check

Computer Programming

True or False:

My R scripts don't need to be interpretable by anyone but me and R!

Knowledge Check

Computer Programming

True or False:

My R scripts don't need to be interpretable by anyone but me and R!

You should strive to make your computer programs interpretable to all computers, including humans!

Make your code easy to read!
