

Describing Categorical Variables

Demo

Create a bar plot of counts.

Factors

Specify the levels (ordering of categories).

```
1 penguins_df <- penguins_df %>%  
2   mutate(species = factor(species, levels = c("Gentoo", "Adelie", "Chinstrap")))
```

Knowledge Check

PollEv.com/
albertlee033

True or False:

Categorical variables (columns) must be converted to factors before you plot them in a bar chart.
