Linear Regression Overview

Linear Regression

- Predict the **dependent** variable based on **independent** variables.
- Describe the relationship between **dependent** and **independent variables**.

The dependent variable must be continuous and normally distributed.

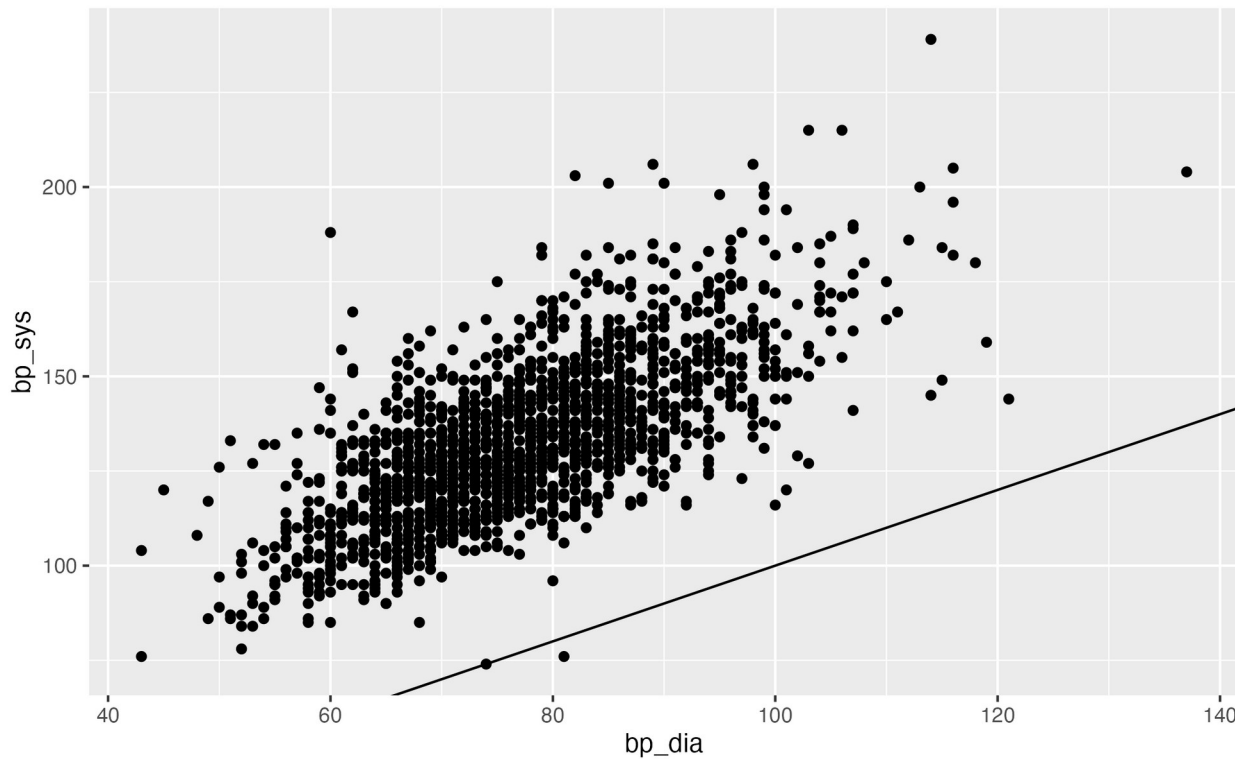

Demo

Quick data checks

Knowledge Check

Suppose we are trying to predict systolic blood pressure based on diastolic blood pressure.

True or False: Systolic blood pressure is our independent variable and diastolic blood pressure is our dependent variable.

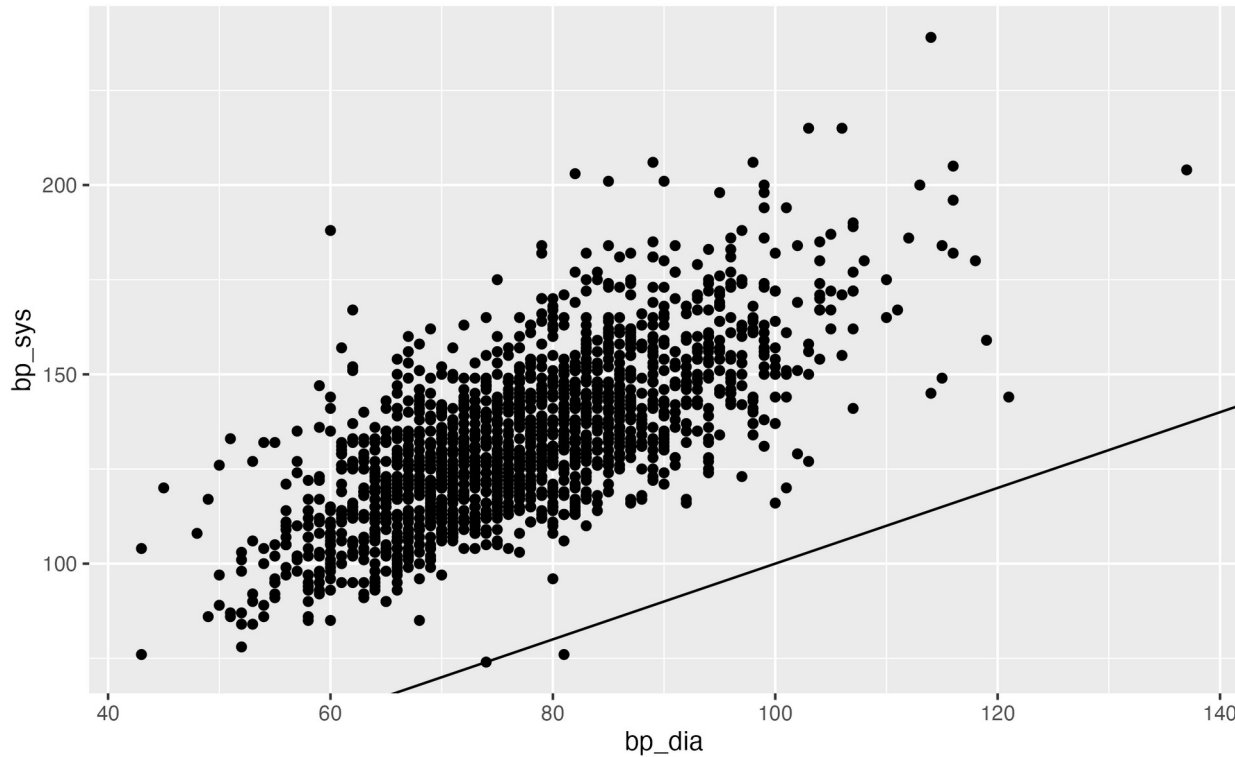

a) True

b) False

Knowledge Check

Suppose we are trying to predict systolic blood pressure based on diastolic blood pressure.

True or False: Systolic blood pressure is our independent variable and diastolic blood pressure is our dependent variable.

a) True

b) False
