Other Regression Diagnostics

Model Diagnostics

How do we check whether our model meets its assumptions?

Let’s avoid this

Multicollinearity:

When predictors (independent variables) are strongly related to one another.

Variable In lation Factor (VIF):

- **VIF = 1**: No multicollinearity
- **1<VIF<5**: Some multicollinearity - usually acceptable
- **VIF > 5**: Potentially concerning multicollinearity

Demo

Multicollinearity

Knowledge Check

True or False: Based on the VIF values, there is no evidence of concerning multicollinearity among the predictors.

```
   bp_dx    age_2014   female
1.019053 1.061360 1.042701
```

a) True

b) False
